## The Perfect Partnership:

BP has joined together with leading European manufacturer Truma to bring BP Gas Light to the caravan and motorhome market in the UK. Weight is crucial for caravans and motorhomes - less weight wasted on essentials means more space for luxuries which is why BP and Truma are so excited to bring this innovative product to you. You will find BP Gas Light stocked in many Truma registered dealerships. Truma dealers also offer the cylinder compartment bracket, strap and adapter kit that you need to convert older caravans and motorhomes to fit BP Gas Light.

## The go-anywhere bottle.

Weight of propane	5kg	10kg
Weight of bottle	4.5kg	6.7kg
Total weight of full bottle	9.5kg	16.7kg
Height	393mm	587mm
Diameter	305mm	305mm

## Lightweight.

BP Gas Light's state of the art technology means it weighs approximately half as much as a steel cylinder of the same size when empty which makes it much easier to carry.

## Visible content level.

Because the bottle is semi-transparent, you can view the gas level at a glance to help you plan ahead. You will never run out of gas unexpectedly again.

## Easy to connect

The bottle is fitted with a 27mm clip-on valve which is simple to connect. No need for a spanner - one click and it's on.

## High-performance materials.

The bottle is made of corrosion-proof fibreglass-reinforced material and passes all European safety standards.

## Easy to carry.

The ultra-solid handle is easy to grip, while offering total protection for the valve.

BP is proud to be a member of the National Caravan Council

There are three important things to know when you are considering using BP Gas Light with your caravan or motorhome.

### 1. Which BP Gas Light size will fit in my caravan?

BP Gas Light comes in two different sizes - 5kg and 10kg. This number refers to the weight of gas in the bottle when it is full. Different makes and models of caravan and motorhome fit different sizes of BP Gas Light. Please check your manual or contact your manufacturer to find out which size will fit your caravan or motorhome.

### 2. How do I secure the cylinder in my cylinder compartment?

Some cylinder compartments have mouldings or brackets on the floor of the compartment that are designed to fit steel cylinders. You can buy a plastic bracket to fit in your cylinder compartment which will hold both BP Gas Light and steel cylinders safely and securely in place. You may also find that you need a longer material strap to hold the slightly wider BP Gas Light cylinder in place.

### 3. How do I connect the cylinder to my caravan?

BP Gas Light is fitted with a 27mm clip-on valve. This is much safer than traditional screw fit valves because you instantly know when you have fastened the connector securely rather than messing about with a spanner. However, many makes and models of caravan and motorhome are not fitted to take 27mm clip-on valves. A simple adapter kit is required.
